RIJKSUNIVERSITEIT GRONINGEN

**The Galactic Metallicity Gradient
Infrared and Radio Studies of H II regions**

PROEFSCHRIFT

ter verkrijging van het doctoraat in de
Wiskunde en Natuurwetenschappen
aan de Rijksuniversiteit Groningen
op gezag van de
Rector Magnificus, dr. F. Zwarts,
in het openbaar te verdedigen op
vrijdag 13 december 2002
om 9.30 uur

door

Nieves Leticia Martín Hernández

geboren op 23 juni 1975
te Santa Cruz de La Palma, Spanje

Contents

1	Introduction	9
1.1	H II regions: the nurseries of stars	9
1.2	An overview of the physical processes in H II regions	11
1.3	The forbidden spectrum of H II regions	13
1.4	H II regions in the Galactic context	16
1.5	In this thesis	17
2	An ISO spectral catalogue of compact H II regions	19
2.1	Introduction	20
2.2	Observations	21
2.2.1	The sample	21
2.2.2	The SWS observations	21
2.2.3	The LWS observations	24
2.3	Data reduction	25
2.3.1	SWS data reduction	25
2.3.2	LWS data reduction	29
2.3.3	Extended source calibration	31
2.4	Line fluxes	31
2.4.1	Gaussian fits	31
2.4.2	Error budget	32
2.4.3	Influence of source morphology and size	33
2.5	Comparison with other instruments	33
2.5.1	Comparison with KAO	33
2.5.2	Comparison with IRAS	36
2.6	Properties of the H II regions	36
2.6.1	Kinematic distances	36
2.6.2	Morphology	39
2.6.3	Luminosity	39
2.6.4	Notes on individual sources	42
2.7	The catalogue of combined SWS-LWS spectra	44
2.7.1	Atomic emission lines	44
2.7.2	Molecular emission lines	45
2.7.3	Dust content	45

2.7.4	Ice content	47
2.8	Conclusions	48
2.A	Line fluxes and combined SWS-LWS spectra	50
3	The Galactic metallicity gradient from ISO spectral observations of compact H II regions	71
3.1	Introduction	72
3.2	Extinction	74
3.2.1	H I recombination lines method	75
3.2.2	Comments on individual sources	77
3.3	Density	78
3.3.1	[O III] diagnostic	79
3.3.2	[S III] and [Ne III] diagnostics	79
3.4	Abundance determinations: methodology	82
3.4.1	Photoionization models	84
3.5	Ionization state	84
3.6	Abundances	88
3.6.1	N^{++}/O^{++} and N/O	88
3.6.2	N/H	92
3.6.3	Ne/H, S/H and Ar/H	92
3.6.4	Comparison of abundance gradients with previous studies	94
3.7	Summary	94
4	The stellar content, metallicity and ionization structure of H II regions	99
4.1	Introduction	100
4.2	The sample	100
4.3	Variations in the ionization structure	102
4.4	Influence of the SEDs	103
4.5	Influence of the metallicity	108
4.6	The case of starburst galaxies	109
4.7	Summary and conclusions	110
5	A radio continuum and infrared study of Galactic H II regions	113
5.1	Introduction	114
5.2	Observations and data reduction	115
5.2.1	Extended emission	117
5.3	Contour maps and description of sources	118
5.3.1	Comments on individual sources	118
5.3.2	The linear feature in IRAS 15384–5348	134
5.3.3	VLA data	135
5.4	Physical properties of the ionized gas	137
5.4.1	The n_e – D relation	140
5.4.2	Stellar content	143
5.5	Combining ISO and radio observations	144
5.5.1	Extinction in the near-infrared	147
5.5.2	Extinction in the mid-infrared	148

5.5.3	Elemental abundances	150
5.5.4	The elemental abundance gradient	155
5.5.5	Stellar luminosity, metallicity and nebular ionization structure . . .	159
5.6	Summary and conclusions	162
6	Metallicity and the spectral energy distribution of O stars	165
6.1	Introduction	166
6.2	Description of the models	167
6.2.1	Comparison with other model atmosphere codes	168
6.3	The spectral energy distribution	170
6.3.1	Comparison of predicted EUV fluxes	170
6.3.2	Comparison of ionizing fluxes	173
6.3.3	EUV fluxes and Q_0 and Q_1 values as a function of metal content . .	176
6.4	Spectral classification	176
6.4.1	Optical classification	176
6.4.2	K-band classification	179
6.5	The ionizing structure of single star H II regions	181
6.6	Conclusions	185
7	A VLT spectroscopic study of the compact H II region G29.96–0.02	187
7.1	Introduction	188
7.2	Observations	189
7.3	Results	190
7.4	The recombination lines	195
7.4.1	Applications	197
7.5	The ionizing star of G29.96	201
7.6	The dynamics of G29.96	204
7.6.1	The stellar bow shock model	204
7.6.2	The champagne flow model	206
7.6.3	Final remarks	206
7.7	Summary	207
8	Conclusions and future work	209
	Nederlandse Samenvatting (Summary in Dutch)	213
	Summary in English	227
	Bibliography	241
	Published papers	251
	Acknowledgments	253

*Let's go and see the stars
The Milky Way or even Mars
Where it could just be ours
Let's fade into the Sun
Let your spirit fly
Where we are one
Just for a little fun*

From the song "Fly Away"
by Lenny Kravitz

To Carlos
